SUMMARY

M.S. in Data Science with experience building end-to-end machine learning systems, from data pipelines and modeling to experimentation and evaluation. Worked on graph machine learning and recommendation systems, and developed developer tooling including a VSCode extension with 1K+ downloads.

EXPERIENCE

iDSSP Lab, National Taiwan University
Research Assistant

Jul 2023 – Jan 2026
Taipei, Taiwan

- Conducted research in graph ML and recommendation systems, resulting in 2 first-author publications (*ICLR 2026*, *WWW 2025*).
- Led end-to-end research cycles including problem formulation, modeling, large-scale experimentation, and paper writing.
- Built internal CLI utilities and documentation to standardize cloud-based training and experimentation workflows.

EDUCATION

National Taiwan University

Jul 2023 – Jan 2026

M.S. in Communication Engineering, Data Science Group

- GPA: 4.17/4.3
- Courses: Convex Optimization, Neural Networks, Financial Technology
- Thesis: *Entity-Attribute Duality for Heterogeneous Graph Modeling*
- Advisor: Prof. *Che Lin*

National Cheng Kung University

Jul 2019 – Jun 2023

B.S. in Electrical Engineering

- GPA: 3.60/4.3
- Courses: Data Structures, Probability and Statistics, Operating Systems, Algorithms, Theory of Computation

PROJECTS

AtomHIN | [ICLR 2026](#) | [GitHub](#)

2026

Graph ML, GNNs

- Designed a principled schema framework for heterogeneous graphs, achieving consistent performance across 8 datasets.
- Led end-to-end research and system development, releasing a Python library and benchmark datasets to support practical adoption.

BETag | [WWW 2025](#) | [GitHub](#)

2025

LLMs, Recommendation Systems

- Fine-tuned LLMs on user behavior data to build an automatic item tagging system for recommendation pipelines.
- Achieved up to 46% (user-based) and 26% (item-based) improvements over strong tagging baselines; led a two-person collaboration from design to implementation.

Graph, Algorithms, GNNs

- Improved synthetic graph generation by reducing merge complexity from $O(n^2)$ to $O(n)$, enabling million-scale graph generation in under 10 minutes.

SKILLS

Programming Python

Development Git, CI/CD, Linux

Frameworks & Libraries PyTorch, NumPy, Pandas, Scikit-learn

Languages Mandarin Chinese, English

CERTIFICATIONS

TOEIC 940/990

Jun 2024

SELECTED ACHIEVEMENTS & CONTRIBUTIONS

2026 Reviewer, NeurIPS 2026.

2024 National Taiwan University FinTech Best Project Award (First Place).

2022 Open-source contributor to PyTorch (merged [GitHub PR](#)).

2022 Ahk-Doc: VS Code language service for AutoHotkey (1,763+ [downloads](#)).
